

MTA DC DC

Kaga Electronics/Volgen MTA series of DC/DC converters

Kaga would like to introduce its line of wide-range input board level DC/DC converters. The MTA series is available in 5 watts to 20 watts. All have wide 4:1 input range covering from 9VDC to 75VDC input. The 10W and 20W have the same configuration and pin-out making the next power level a drop in replacement. Operating temperature can be as high as 105°C. The units are in a metal case for heat dissipation and good EMI characteristics. These units are appropriate for applications requiring high reliability, elevated operating temperatures and stable operating characteristics.

Features

- Wide range 4:1 input
- Isolated outputs
- Up to 105°C operation
- Metal case
- Over load and short circuit protection
